# Sustainability – Our Definition

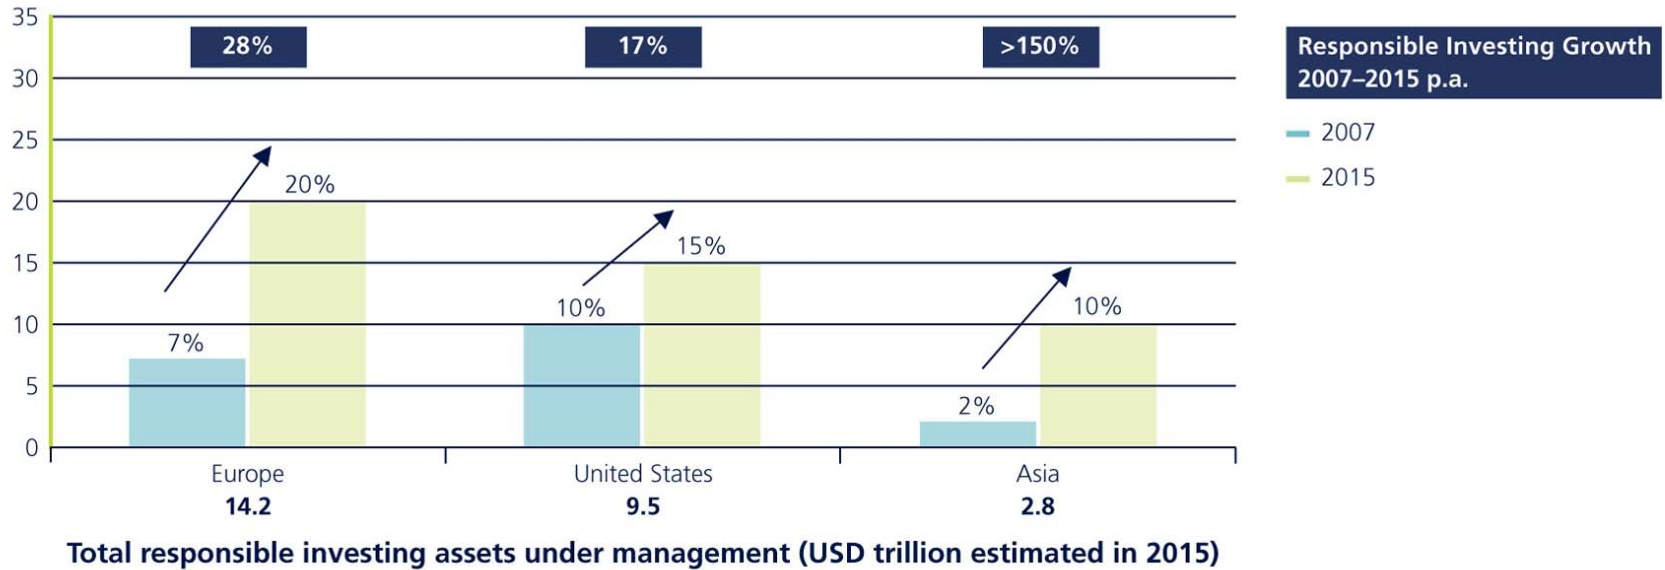

- A company's **capacity to prosper** in a competitive and changing global business environment anticipating and managing current and **future economic, environmental and social opportunities and risks.**
- Our approach focuses on companies that **create long-term shareholder value.**
- From our perspective, sustainability investments are distinct from ethical investments by using a **best-in-class approach** and **integrating economic, environmental, and social criteria.**

# Dow Jones Sustainability Indexes (DJSI)

- Cooperation between Dow Jones and SAM for the publication and licensing of the **Dow Jones Sustainability Indexes (DJSI)**. Launched in 1999.
- The indexes are maintained based on a consistent rules-based methodology.
- A yearly review process and continuous monitoring of companies ensures that the focus remains on best-in-class companies.
- By design, the indexes include high scoring companies in each sector. Benchmark indexes are market-cap weighted, while blue-chip indexes are weighted by sustainability score.

## DJSI – Index Range

The DJSI family is currently comprised of **Global, European, Eurozone, North American, US, Asia Pacific and Korean benchmarks.**

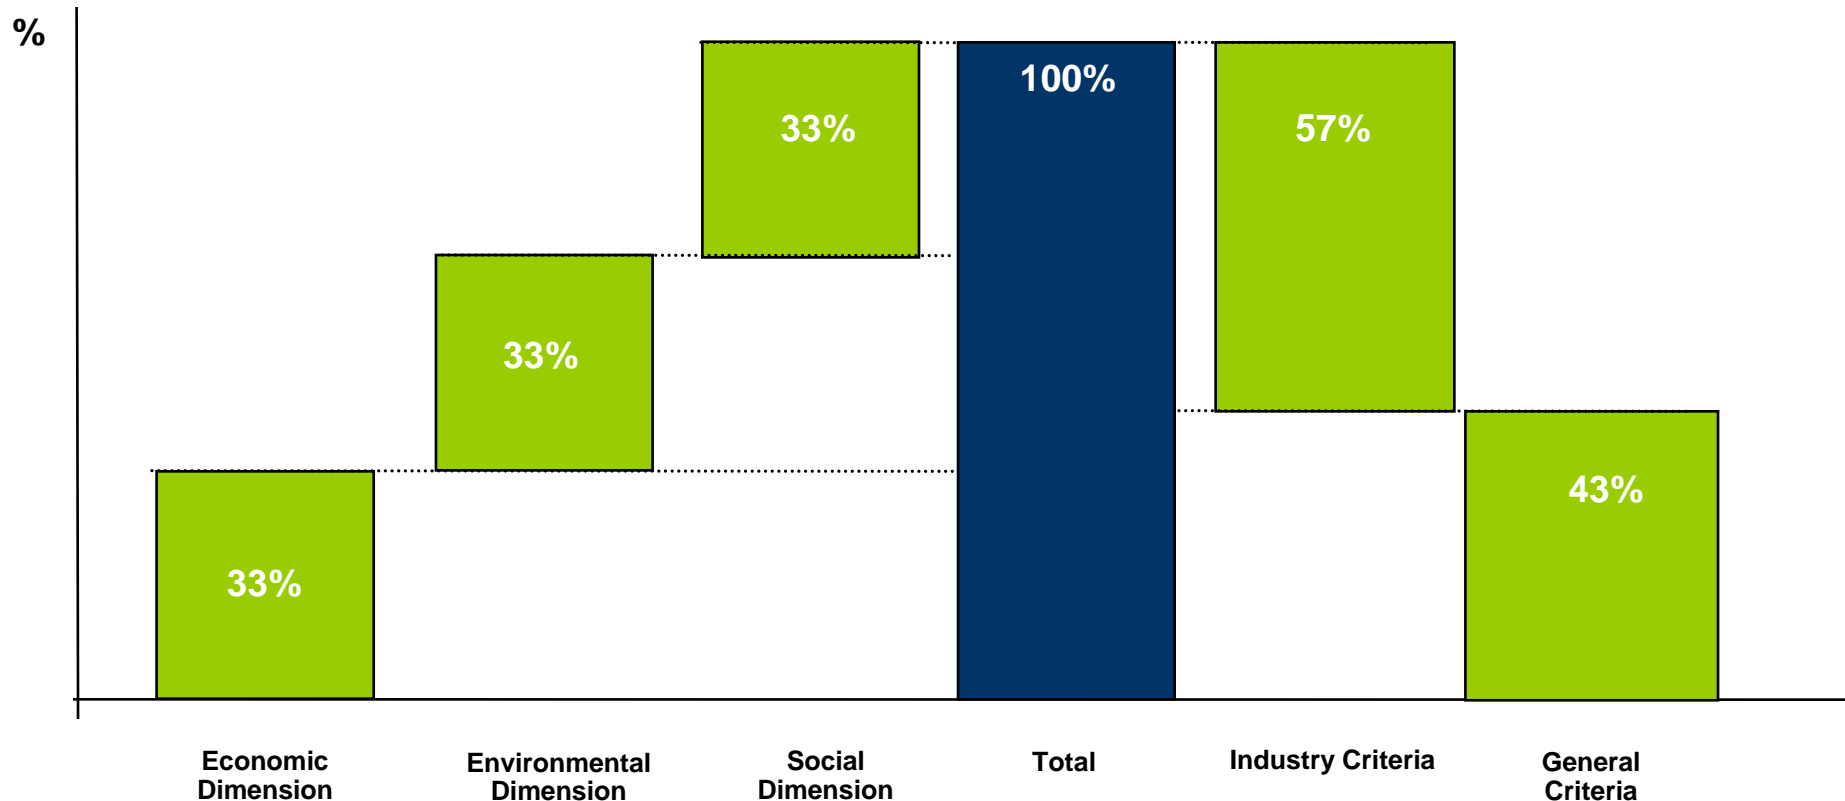

# Sustainability Assessment Features

- Corporate sustainability assessment is designed to identify companies who actively **embrace opportunities** and **manage risks** deriving from **economic, environmental, and social developments**.
- SAM has **over 10 years of in-house experience** in assessing companies through qualitative and quantitative measures.
- Comprehensive research on sustainability practices involves **detailed industry-specific questionnaires, direct company contact, and publically disclosed company documents**.
- Companies are monitored daily for newly arising critical issues, but are formally **assessed annually**. Annual updates to the questionnaires are made to reflect the shifting priorities of the global business environment.
- Company scores are generated based on a **defined set of criteria**, and **quality assurance measures exist** internally and externally (Deloitte) to ensure integrity of the assessment.
